Closure Plan for Hazardous Waste
Storage Facility

Dear Mr. Thomas:

The hazardous waste storage closure plan (submitted under cover letter dated May 29, 1985) for Hamilton Technology has been reviewed by this office. According to the closure plan, all hazardous wastes have been removed from the storage area and the closure procedures specified therein have been accomplished. All hazardous wastes which are currently generated are accumulated in another area for less than ninety (90) days prior to removal.

The closure plan has been determined to be adequate, i.e. meets the requirements of Section 75.265(q) and (o)(1) - (9) of the Department's Hazardous Waste Management Rules and Regulations.

The hazardous waste inspection performed by Greg Harder on April 10, 1985 indicated that the container storage area had been closed properly - all containers of hazardous waste had been removed and no contamination of the area was evident. According to manifest documents and container labels, hazardous wastes are being accumulated on-site for less than ninety (90) days.

The referenced closure plan is hereby approved. As required by Section 75.265 (o)(10), Hamilton Technology should submit to this office within thirty (30) days of the date of this letter certification both by the owner and operator and by an independent registered professional engineer that the facility has been closed according to this approved closure plan.
